WINDOWS 11

THE MANUAL

BY NAYEF ALKHALDI

What is Windows 11?

Windows 11 is the latest major release of the Windows NT operating system developed by Microsoft that was announced on June 24, 2021, and is the successor to Windows 10, which was released in 2015. Windows 11 was released to the public on October 5, 2021, as a free upgrade via Windows Update and Windows 11 Installation Assistant on eligible devices running Windows 10.

Should I upgrade?

It's your choice.

Microsoft will obviously advise long-term switching to Windows 11, but you can still use on Windows 10 if you want. Windows 10 will continue to be supported through 2025, but Microsoft hasn't said how many updates Windows 10 will officially get moving forward.

The Positive Points:

1. New Wallpaper

Microsoft has included five new wallpapers for desktop background and lock screen background.

2. New Theme

The default windows 10 themes are gone. They included six new themes with different color schemes.

3. Start Menu

Apart from the new wallpaper and a login chime, the first thing you'd notice is the Taskbar. The taskbar has been redesigned and instead of aligning the Start Menu and app icons to the left, it's now centered, giving a macOS vibe. However, the System Tray is still in the bottom right corner. If you don't like it, then you can revert the Start button to the left.

Not just that, even the Start Menu is redesigned. For starters, Live Tiles are finally gone for good and the Start Menu has all your pinned or favorite apps on top which you can customize. It would also show recent activities such as the last opened photo, last installed apps, etc. To access all the apps, you can click on All apps or simply start typing the app's name.

4. In-Built Windows Terminal

Earlier Windows 10 users need to install windows terminal manually from the Microsoft store. now they have included it in windows 11.

5. Search Menu

Windows 11 has also separated the search from the Start Menu. The search bar is now present on the top but the functionality is more or less the same. Below the search menu, you get app suggestions based on your usage. On the left, there are recently used apps and on the right, Edge browser suggestions.

6. Redesigned App Windows

Now, if you look closely, the new app windows float instead of being attached to the Taskbar. The windows have rounded corners bringing the design language up to speed. This is consistent across the OS meaning whether you open the File Explorer or the Settings app, all windows have a consistent design.

7. New Icons

Ah yes, the icons. As seen in the leaked images, Windows 11 has completely new icons for everything. The icons are more vibrant with a hint of shadow that moves away from the flat design icons of the yore.

8. Dark Mode

This is for all the Dark Mode fans. The Dark Mode is now more colorful than ever. Also, the Windows 11 start menu is translucent which means you get a hint of the background wallpaper shining through.

9. Microsoft and 3rd-Party Stores

If you were expecting a whole new app redesign then you would be slightly disappointed. Most native apps such as Notepad, Calculator, Action Center, etc. have not received any design changes. Even the Settings menu is the same except for the Microsoft Store. The Microsoft Store is fully redesigned and looks like the Live Tiles that were removed from the Start Menu have moved to the Microsoft Store.

10. Quick Snapping

Another interesting feature is that now when you hover over the maximize icon, it shows you split-screen options and when you click on it, it just snaps into place. The feature existed on Windows 10 too but is now quicker. You can hit the Win key + Left or Right arrow to enter split-screen mode.

11. Widgets

The most significant change in Windows 11 is Widgets. You click on the Widget icon at the Start Menu and you'll see Widgets. On the top, you have Weather and other widgets. But, at the bottom, it's all Bing News. So, imagine it to be more like the Google app on your phone but for Microsoft. It will display trending and important news. Clicking on an article link will open Edge.

Widgets for the new windows

Of course, you can use third-party apps like Edge Deflector to redirect it to Google Chrome. But, the important thing is that now third-party apps can make widgets too. So, suppose Microsoft mail comes up with a Windows 11 widget. You can read all your emails from the Widget window without opening the app. I liked the Widgets menu but it depends on third-party apps on how useful they make it.

About the negative points:

Warning: These negative points will not significantly affect your experience of the new system.

1. Start Menu

The start menu within Windows 11 has been totally changed from its previous version of the Windows 10 operating system. Within Windows 10 the start menu will appear from the left-hand side but within Windows 11 the start menu will appear at the center of your computer screen.

And if you are a regular windows 10 user then you have to spend some amount of time to learn the windows 11 start menu because here the start menu is totally redesigned.

And within windows 11, there are not lifetimes, generally, lifestyles started within windows 8 because of this you will see the icons on the start menu, the icons were dynamic and they always show you the notifications or whether. Here in this version of windows, these features are not available.

2. Search menu:

Within Windows 10 operating system the search menu is available on the start menu options, therefore if you want to search any kind of apps or other things then you can easily do that by typing on the search box.

While within windows 11 operating system is separated from the start menu app, and if you want to search something then you have to click on the search icon and then the searched apps will appear in front of you.

4. Powershell

Yes, Windows Powershell is removed from the new system Windows 11.

but there is a few ways to fix this problem (take a look at chapter 5)...

5. slower pc

The large updates and the new styles may slows down your pc by %5 - %15.

For example, if an action on your pc takes 0.2 seconds, after the update it might takes 0.21 - 0.25 seconds.

If one of the results was yellow or red, it means that your PC/Laptot can't run Windows 11 correctly.

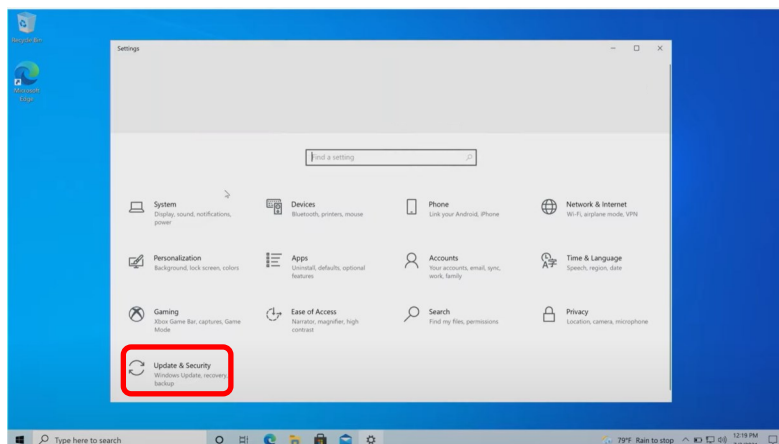

(take a look at chapter 5)

Step 2: Join Windows Insider Program

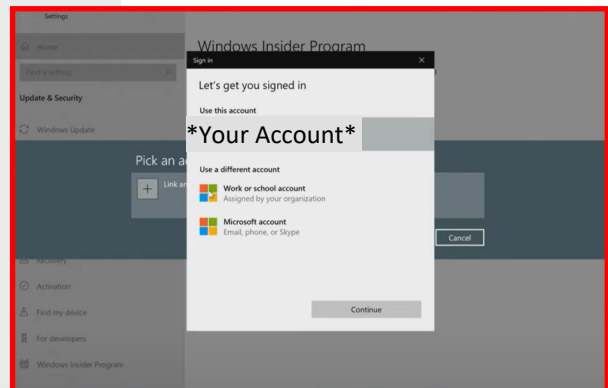

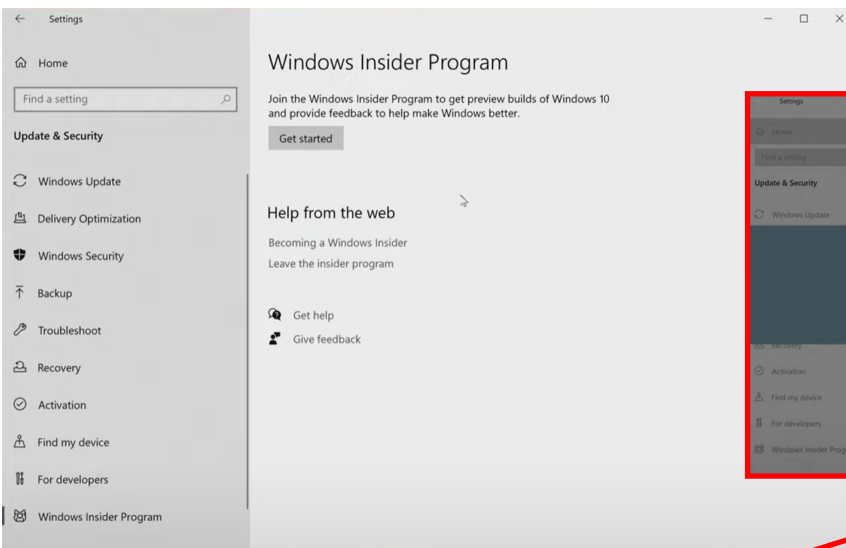

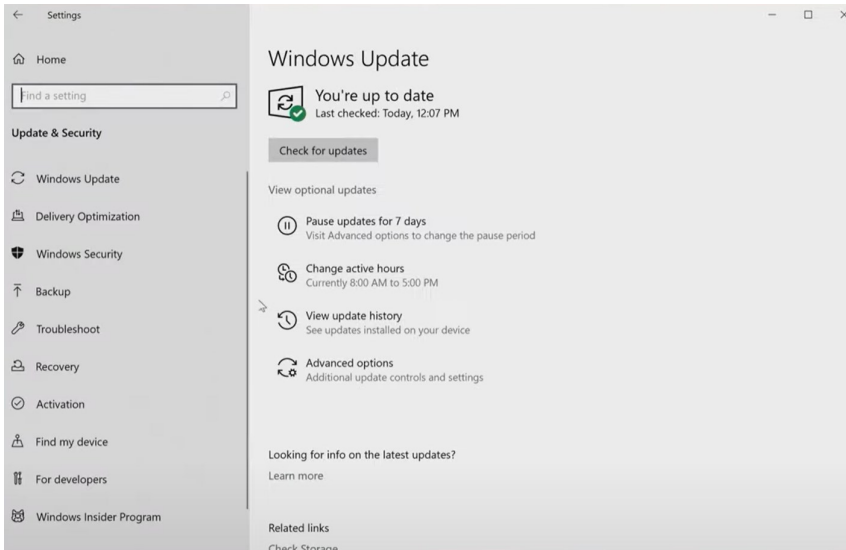

On your desktop, Go to settings or press windows key + I on your keyboard.

Click on Update & Security, or search for it if you wish...

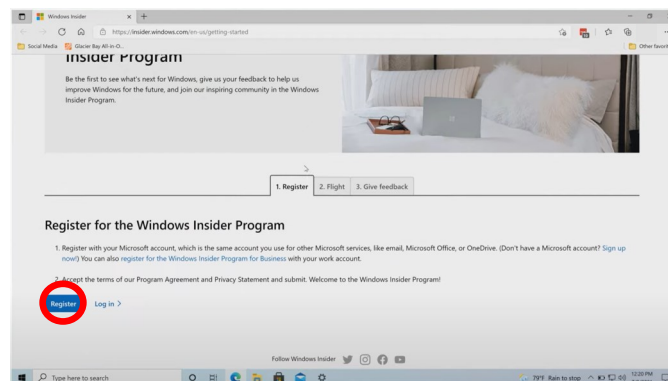

So it doesn't show the update even if we checked for updates, so all we have to do is to Join Windows Insider Program.

If you already have an account get started now! And then **LOG IN.**

Else, click on Becoming a Windows Insider program

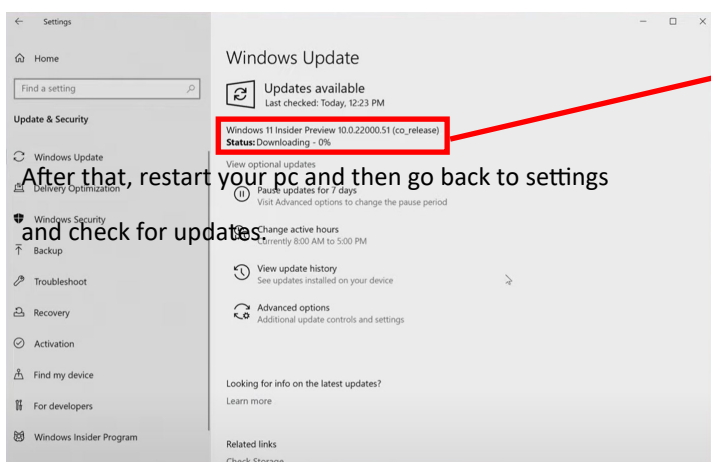

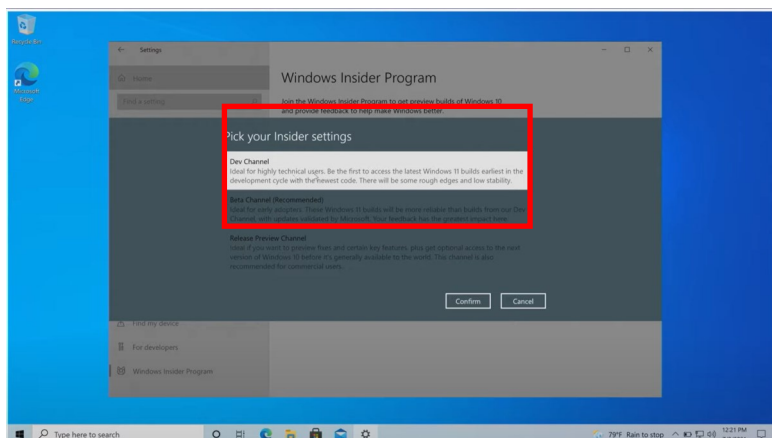

And register your account.

There are three options, I will explain to you their meanings:

- 1 - Dev channel – Aimed at technical users; early builds with newest code; some instability expected
- 2 - Beta channel – Aimed at early adopters; builds with a specific ETA; better reliability
- 3 - Release Preview channel – Aimed at the rest of testers; new builds ahead of public release.

choose wisely ;)

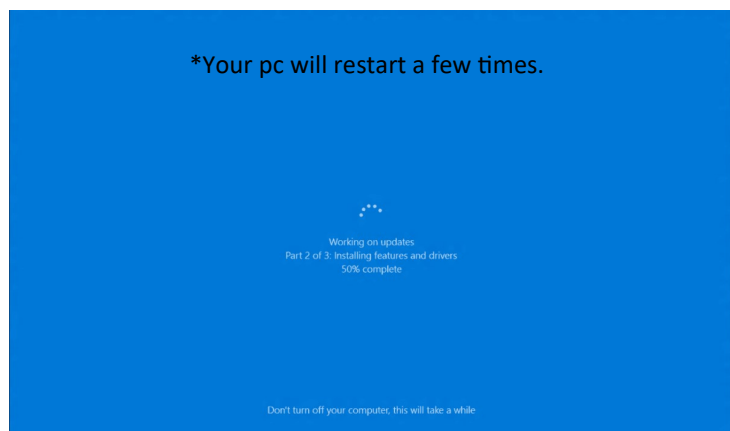

Wait for the update to complete.

After installation, restart your pc.

restart will show in options

After that, restart your pc and then go back to settings and check for updates.

Ok, the update will take such a long time, On average, the Windows 11 update takes from 2.5 hours to 6 hours.
